Re: Powell Village Green Park Project – Phase 1 – *Existing Conditions Traffic Analysis*

The objective of this study is to provide analysis of background traffic growth along the Powell Rd (SR 750) and Liberty Rd corridors located in the heart of downtown Powell, OH. This study investigates the notable congestion experienced throughout the project area that will be factored into the future redevelopment of Village Green Park for both the 2030 Opening Year (OY) and 2050 Design Year (DY). In addition, this study includes analysis of the CSX railroad crossing and its impact to the flow of vehicular traffic.

The detailed study area includes twelve (12) of the major intersections located in and adjacent to the heart of Powell, OH (shown in **Figure 1** below). The CSX railroad crossing will focus on the track that bisects Powell Rd just west of Depot St. The limits of the study area along Powell Rd (SR 750) include the intersections of Sawmill Pkwy and Bartholomew Blvd to the west and east, respectively. The limits of the study along Liberty Rd include the intersections of Seldom Seen Rd and Murphy Pkwy to the north and south, respectively.

To perform this study, traffic information was collected via turning movement counts at each of the study intersections in accordance with the dates highlighted in the approved *Traffic Study Memorandum of Understanding* located in **Appendix A**. The collected counts were analyzed and used to establish the AM and PM Peak hour volumes throughout the project area. Once determined, background growth rates obtained by the Mid-Ohio Regional Planning Commission (MORPC) were applied to the existing counts to establish the 2030 OY and 2050 DY volumes in accordance with the Ohio Department of Transportation's (ODOT) standards of practice.

The raw traffic counts, growth rate correspondence, and OY/DY adjusted traffic volumes can be found in **Appendix A**.

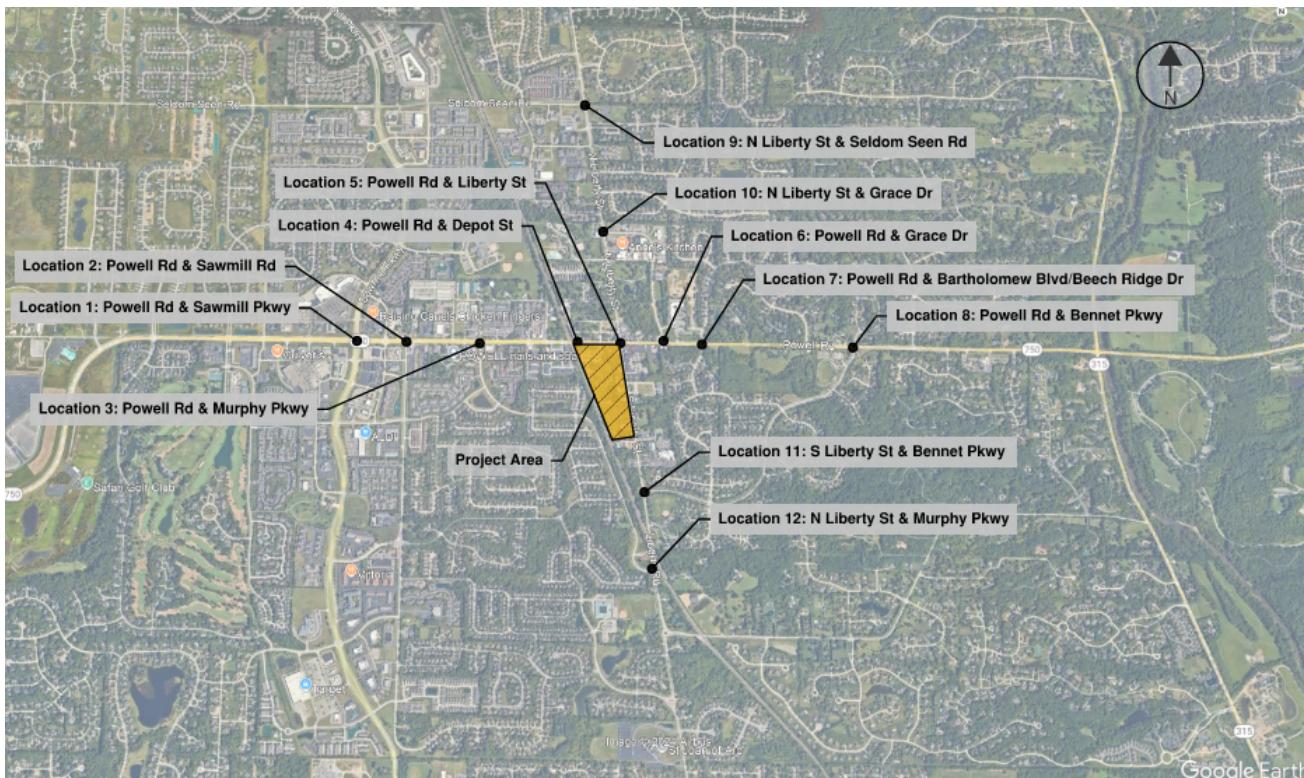

Figure 1: Study Area Map

The study intersections were analyzed according to the methodologies published in the Highway Capacity Manual, 7th edition. For this project, Synchro Version 12 software was used to conduct the analysis for traditional intersections. Software printouts for the evaluations of intersections have been included in **Appendix B**. These software packages compute delay values based on factors such as number and type of lanes, intersection controls such as STOP signs or traffic signals, traffic volumes, pedestrian volumes, geometric characteristics, signal timing characteristics, roadway grade, speed limit, etc. This analysis determines the average delay experienced by vehicles. This value is an average across the entire peak hour. Vehicles arriving during the busiest portion of the peak hour or arriving in a clustered group instead of in a random pattern could experience longer delays. On the other hand, vehicles arriving during a lighter portion of the peak hour could experience a shorter delay. The average delay is used to determine the corresponding level of service (LOS) values for each intersection movement, as well as the intersection in its entirety.

LOS is expressed as a letter grade, in a range from 'A' through 'F'. In this context, 'A' represents the best conditions, with very little or no average delay to vehicles. LOS 'F' is the worst of conditions, equated with very large average delays and few gaps of acceptable length. The following tables identify level of service criteria for signalized and unsignalized intersections.

**Table 1: Level of Service Criteria For Signalized Intersections**

Level of Service	Average Delay/Vehicle (seconds)	Description
A	Less than or equal to 10	Most vehicles do not stop at all. Most arrive during the green phase. Little or no delay.
B	>10 to 20	More vehicles stop than for LOS A. Still good progression through lights. Short traffic delays.
C	>20 to 35	Significant numbers of vehicles stop, although many pass through without stopping.
D	>35 to 55	Many vehicles stop. Individual signal cycle failures are noticeable. Progression is intermittent.
E	>55 to 80	Considered to be the limit of acceptable delay. Individual cycle failures are frequent and progression is poor.
F	>80	Extreme and unacceptable traffic delays.

SOURCE: Transportation Research Board, Highway Capacity Manual 7th Edition.**Table 2: Level of Service Criteria for Unsignalized Intersections**

Level of Service	Average Delay/Vehicle (seconds)	Description
A	Less than or equal to 10	Little or no delay, very low main street traffic
B	>10 to 15	Short traffic delays, many acceptable gaps
C	>15 to 25	Average Traffic delays, frequent gaps still occur
D	>25 to 35	Longer traffic delays, limited number of acceptable gaps
E	>35 to 50	Very long traffic delays, very small number of acceptable gaps
F	>50	Extreme traffic delays, virtually no acceptable gaps

SOURCE: Transportation Research Board, Highway Capacity Manual 7th Edition.

An intersection LOS 'D' is considered by many traffic safety professionals to be the minimum acceptable condition in an urban/suburban area. For rural areas, most highway agencies consider LOS 'C' the minimum. Given the location of the study intersections, on the edge of an urbanized area, LOS 'D' was utilized as the study goal.

The operational analysis focuses on the AM and PM peak commuter periods for the 2030 OY and the 2050 DY. The signalized and unsignalized intersections were evaluated under the existing conditions during both peak periods. Please note that existing traffic signal timings were not available at the time of this study. The signal cycle splits were optimized using Synchro, and actual results may be different than indicated as part of this analysis. **Tables 3 and 4** show the intersection LOS and corresponding delays during the AM and PM Peak Hour for 2030 OY and 2050 DY, respectively.

As can be seen by the LOS results above, particularly during the DY PM Peak, 50% of the project area intersections are outside the target LOS. This suggests that the roadway and associated intersections may not be designed with enough excess capacity to handle even the background growth of the roadway network.

The existing CSX rail grade crossing at Powell Rd (SR 750) just west of Depot St has a significant impact on congestion in the study area. This crossing was analyzed using Synchro 12 modeling to gauge the LOS, delay, and queues generated along Powell Rd due to a single train incident. There is conflicting information related to the number of trains per day using the Powell Rd (SR 750) crossing. Per the Ohio Rail Development Commission (ORDC) GIS Map, this crossing experiences 21-30 trains per day. Per the Ohio Railroad Information System (ORIS), the total number of trains utilizing the active crossing (US DOT 228650P) during the day/night/switching is 2, 3, and 4 respectively. In addition, the website indicates there is an inactive crossing (US DOT 481480P) with a total of 12-day and 15-night trains. For the purposes of this analysis, train speeds through this crossing are assumed to be 25 MPH.

It was assumed that one train crosses Powell Rd (SR 750) during each of the peak hours during the OY and DY to provide analysis for the “worst case scenario”. The length of train is assumed to be 7,200 ft, which is based on a combination of average train lengths found during research and engineering judgement. This suggests that it takes approximately 200 seconds (3.3 minutes) for a train to clear the gates at this crossing. Please note that due to the cycle length limitations of Synchro 12, the average delay and 95th percentile queue values had to be doubled to account for the peak hour results.

Tables 5 and 6 show the LOS, corresponding delays, and the 95th percentile queues along Powell Rd (SR 750) at the railroad crossing during the AM and PM peak hours for 2030 OY and 2050 DY, respectively.

Table 5: 2030 OY AM/PM Peak Delay, LOS, 95% Queues at Railroad Crossing – Existing Configuration

Intersection	2030					
	Approach/ Movement	AM Peak			PM Peak	
		95th% Queue	LOS	Delay	95th% Queue	LOS
Powell Rd & CSX Tracks	EB	1080'	C	23.2	1472'	C
	WB	1140'	D	35.8	1500'	D

Table 6: 2050 DY AM/PM Peak Delay, LOS, 95% Queues at Railroad Crossing – Existing Configuration

Intersection	2050					
	Approach/ Movement	AM Peak			PM Peak	
		95th% Queue	LOS	Delay	95th% Queue	LOS
Powell Rd & CSX Tracks	EB	1538'	C	28.2	2208'	D
	WB	1614'	D	42.0	2586'	D

As can be seen from the analysis, the 95th percentile queues due to train events extend well beyond adjacent signalized intersections along Powell Rd (SR 750) for both the 2030 OY and 2050 DY.

NEXT STEPS

Phase 2 will take the *Existing Conditions Traffic Analysis* and expand it to a comprehensive traffic study. This study builds off the existing conditions analysis completed as part of Phase 1 with the ultimate goal being to identify the traffic related impacts associated with the Village Green development.

Estimates for the number of trips generated by the Village Green development will be calculated using information from the 11th Edition of the Institute of Transportation Engineers (ITE) Trip Generation Manual. These trips will be distributed throughout the project corridor using distribution methods consistent with existing traffic patterns in conjunction with engineering judgement based on anticipated origin and destinations of the users. This process will be completed in collaboration with all key stakeholders and include preliminary warrant and capacity related calculations to establish potential impacts prior to selecting a preferred alternative for the final build condition of the Village Green development.

Phase 2 will also include consideration for potential congestion mitigation efforts associated with modal splits (vehicular trips to public transit/pedestrians/bicyclists) as well as alternative routing. The Synchro models will be updated to reflect the preferred alternative build conditions including all trip adjustments and improvements to traffic control and roadway geometry identified as part of the traffic study. This will allow us to provide a comparison between the 'No-Build' and 'Build' conditions for both the 2030 OY and 2050 DY.

[Report this Email or Mark as Safe](#)

Powered by Mimecast

Jon,

We have completed processing growth rates for your traffic study area.

Please use linear annual growth rates as summarized below.

Location	Linear Annual Growth Rate
Powell Rd e/o Liberty St	1.00%
Liberty St n/o Powell Rd	2.40%
Powell Rd w/o Liberty St	1.40%
Liberty St s/o Powell Rd	2.40%

Note: The above rate was derived based on planning level analysis by using MORPC's regional travel demand model.

If you have any questions, please let me know.

Thanks,

HWASHIK JANG

Senior Planner | Mid-Ohio Regional Planning Commission

T: 614.233.4145 | hjang@morpc.org

Subject: RE: MORPC Traffic Growth Rates Data Requirement & Request

Caution: This email originated from outside the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe. When in doubt, contact the IT team

Good morning Hwashik, hopefully you're doing well! In reference to the discussion below, please see attached for the additional traffic count on the north leg of Liberty St. For additional reference, including the station (location)

Approved Traffic MOU

Date of Meeting

10/18/24

TRAFFIC STUDY MEMORANDUM OF UNDERSTANDING

PROJECT DESCRIPTION

Brief description of the project including build alternatives, boundaries, anticipated developments, etc.

This project includes analysis of traffic impacts associated with the redevelopment of the *Village Green Park* area located in the heart of downtown Powell, OH into a mixed-use development. In addition, this study will include an investigation into the notable congestion experienced throughout along the Powell Rd (SR 750) corridor. This study will include a significant component identifying alternate routes to help mitigate congestion and make the downtown area more walkable/bikeable.

STUDY AREA AND PROJECT ALTERNATIVES

Include a brief description of the study area below including intersections to be counted, study requirements, etc.

The study area will include eight (8) of the major intersections located in and adjacent to the heart of Powell, OH. These will be focused along the two (2) primary roads through the City: Powell Rd (SR 750) and Liberty St. The borders of this study will include the intersections of Powell Rd at Sawmill Pkwy and Bartholomew Blvd to the west and east respectively and Liberty St at Seldom Seen Rd and Murphy Pkwy to the north and south respectively.

ANALYSIS SCENARIOS

Include list of what study periods will be required.

Opening Year No-Build (2030), Opening Year Build (2030), Design Year No-Build (2050), Design Year Build (2050)
AM & PM Peak Hours Only

DATA SOURCES/COLLECTION

Include list of traffic count details, growth rate calculations, trip generation, PHF, etc.

- 12-HR (6AM - 6PM) Turning Movement Traffic Counts to be conducted at all project area intersections.
 - Traffic counts to be conducted in March/April of 2025 to capture full buildout of Depot St once housing development and connection are completed.
 - Traffic counts are anticipated to be collected on Tue-Thu only.
- Background Growth Rates to be determined through coordination with ODOT
- Trip Generation Rates will utilize the most current ITE Trip Generation Handbook (including applicable pass-by and internal capture)
- Existing directional distributions along Powell Rd & Liberty St will be utilized for all new development traffic.
- PHF for the existing intersections will be calculated from the traffic counts and be utilized throughout the analysis

KEY ANALYSIS ITEMS

- Interim review of traffic forecast volumes (*ONLY for large scale studies or when alternative volume calculation methods used*)
- Capacity analysis at study intersections in the peak hour(s)
- Roundabout feasibility and analysis:
- Signal warrants at unsignalized intersections:
- Left/Right turn lane warrants at intersections
- Turn lane sizing
- Horizontal sight distance study at site access points
- Vertical sight distance study at site access points
- Queuing analysis at signalized intersections

Other:

Capacity analysis will utilize Synchro/SimTraffic Version 12

ADDITIONAL COMMENTS/INFORMATION

- There is an ongoing project to interconnect all existing signals throughout the City. This is not anticipated to have a significant impact to the traffic volume counts.
- See attached meeting minutes for additional information.

APPROVED BY:

A handwritten signature in blue ink, appearing to read "C. Alan Stark".

Meeting Minutes

Subject: Powell Village Green – Traffic Discussion

Date: October 18, 2024

Location: MS Teams (Virtual)

Objective: Establish Traffic Parameters

Aaron Stanford, Grant Crawford, Logan Stang (Powell) – Sophia Lanza, Ashley Senn (Pizzuti) –

Attendees: Sean Gillilan, Jon Grimm (OHM)

Discussion:

- Question posed to group regarding the anticipated level of impacts associated with interconnecting signals throughout the city to the Centracs Traffic Management System.
 - Jon Grimm and Grant Crawford both agree that the implementation wouldn't have a significant impact on the vehicular volumes.
- Question posed about specific instances of when to target/avoid data collection. This was a group effort to establish an agreed upon list.
 - School needs to be in session
 - Avoid the Columbus Zoo Wildlights as this would skew traffic volumes significantly
 - The holiday season in general would likely skew data due to the close proximity to Polaris
 - Avoid Powel Festival as well as the 4th of July
- Discussed conducting 8 or 12 hour turning movement counts at identified locations on the map shared with the City.
 - The Powell Rd & Bartholomew Blvd/Beech Ridge Dr and Powell Rd & Depot St intersections should also be counted.
- Discussion of the design year horizon resulted in an agreed upon 20 years.
- Discussed that the ITE Trip Generation manual would be utilized to establish new trips associated with any developments. Regarding trip distributions, it was decided that existing directional distributions along the roadway networks would be used. Engineering judgement will apply should the final design designations justify it.
- The City will be able to provide existing signal timings for use as part of the capacity analysis.
- OHM discussed using a sub-contractor to conduct the traffic counts. These would likely be done via video.
 - City requested that they be notified as soon as possible once dates are determined to help with public involvement and to ensure no issues with any other projects.
- Only one known development was discussed which is adjacent to Nocterra located off Depot St north of Powell Rd. This development will consist of 19 single-family units but most importantly Depot St will be connected providing these residents in addition to the existing neighborhood north of there direct access to Powell Rd, which will have an impact on the existing traffic patterns.
